UNIT III – DIGITAL DOCUMENTATION

LibreOffice Writer

Exam-Ready Chapter Notes

Definitions • Key Terms • Procedures • Revision Points

Chapter 4 – Introduction to Word Processor

Chapter 5 – Editing Text Using Writer

Chapter 6 – Apply Formatting Features

The PDF for the remaining chapters - 7 , 8 , 9 [Working With Tables, Printing A Document, Mail Merge] is yet to arrive

Prepared from the supplied Writer notes/source files.

Introduction to Word Processor

4.1 What is a Word Processor?

Word Processor: an application software that provides tools to create, edit, format, store and print text-based documents.

Word Processing: the entire process of composing, editing, formatting and printing a document using a word processor.

Popular word processing applications include:

- LibreOffice Writer and OpenOffice Writer (free & open-source)
- WPS Office (Writer, Spreadsheet, Presentation)
- Google Docs (free, cloud-based)
- MS Word and Adobe Acrobat (proprietary)
- WordPad / Notepad (bundled with Windows OS)

Advantages of using a Word Processor

- It is very easy to type, edit and format a document to make it appealing.
- Documents once created can be stored for future reference.
- It allows creation of professional documents using templates.
- It produces an error-free document by checking and correcting Spelling and Grammar.
- A document can be protected using a password so that it is not accessed by an unauthorised person.
- A digital document is portable, shareable and can be used in collaboration.

4.2 Introduction to LibreOffice Writer

Writer is the word-processing component of the LibreOffice suite. It is used to create letters, reports, brochures, books and newsletters. Writer saves a file in the Open Document Text format, with extension .odt, which is an open standard and can be exported to other formats such as .doc, .docx, .rtf and .pdf.

Starting LibreOffice Writer

- Click on the Start button (Windows icon) in the lower-left corner of the screen.
- Type LibreOffice in the search bar.
- Click on LibreOffice Writer from the search results.

Alternatively, if LibreOffice is pinned to the taskbar, click the LibreOffice icon and choose Writer.

Parts of the LibreOffice Writer Window

- Title Bar \u2013 the topmost bar; shows the document name and application name, with Minimise, Maximise/Restore and Close buttons on the right.
- Menu Bar \u2013 placed below the Title Bar; contains drop-down menus (File, Edit, View, Insert, Format, Styles, Table, Form, Tools, Window, Help) through which the user interacts with every feature.
- Standard Toolbar \u2013 second row; remains the same across all LibreOffice components and contains frequently used tools/options.
- Formatting Toolbar \u2013 third row; a context-sensitive bar \u2014 the tools shown change depending on where the cursor is (e.g. text tools when on text, picture tools when on an image).
- Side Bar \u2013 vertical panel on the right giving quick access to Properties, Styles, Gallery, Navigator, etc.

- **Work Area / Workspace** \u2013 the space where the text of the document is typed; a Horizontal Ruler at the top helps align text using tabs, indents and margins.
- **Status Bar** \u2013 located at the bottom of the workspace; displays the current page number/total pages, word & character count, language, page style and zoom slider.

Menu Bar \u2014 Purpose of Each Menu

4.3 Creating and Saving a Document

Creating a New Document

- Use Ctrl+N, or
- Click the New icon on the Standard Toolbar, or
- Go to File \u2192 New \u2192 Text Document.

Saving a Document

Save (Ctrl+S): used when you want to keep the current file name and location and simply update the document.

Save As (Ctrl+Shift+S): used to (a) change the name of the file, (b) change its location, or (c) change the file format/extension.

The AutoRecovery feature of LibreOffice automatically saves the open document at a specified time interval, so that unsaved work can be recovered after an unexpected shutdown.

Saving a Document with Password

To restrict access to a document (so it can only be opened using a password):

- Select File \u2192 Save As.
- Tick the \u201CSave with password\u201D checkbox in the Save As dialog box.
- Click Save. The \u201CSet Password\u201D dialog box opens.
- Type the password in the \u201CEnter password to open\u201D textbox and retype it in the \u201CConfirm password\u201D textbox.
- Click OK.

Note: If a password is lost, LibreOffice provides no way to recover the document, since it is encrypted.

Closing a Document

- Go to File \u2192 Close, or
- Click the [x] Close button on the Title Bar (Ctrl+W closes only the file; Ctrl+Q closes the file and LibreOffice).

If a document has unsaved changes, closing it will prompt the user to save the changes first.

Opening an Existing Document

- Using the Recent Documents option in the Start Centre.
- Using Open File in the Start Centre and then the Open dialog box to browse to the file.
- Inside Writer, use File \u2192 Open (Ctrl+O).
- From the Standard Toolbar, use the Open File tool.
- Using File Manager/File Explorer of the operating system, locate the file and double-click it (this opens it automatically in the correct software).

Changing Views of a Document

Writer provides three ways of viewing a document, available under the View menu:

- **Normal View** \u2013 the default editing view.

- Web View \u2013 shows how the document would appear as a web page (best for content that will be hosted online).
- Full Screen View \u2013 hides all toolbars to display only the document (Ctrl+Shift+F).

Print Preview: shows exactly how the document will look when printed, following the WYSIWYG (What You See Is What You Get) principle.

Navigator

The Navigator (F5, or Sidebar \u2013 Navigator) lets the user jump quickly to any object \u2013 Heading, Table, Image, Comment, Bookmark, etc. \u2013 in a large document without scrolling.

Key Terms

Summary

- A word processor is a software application which provides tools to create, edit, format, store and print a document.
- Text created using a word processor is known as a document; the process of creating it is called Word Processing.
- Writer is a free word processor included in the LibreOffice suite; it creates an Open Document File with the .odt extension.
- A block is a selected section of text; most commands applicable to a word can be applied to a block.
- Clipboard is a temporary holding area used for storing cut or copied data.
- A dialog box is a small window in which a user response is required to complete a task.
- The LibreOffice window comprises the Title Bar and the Writer Window; the Writer Window comprises the Menu Bar, Standard Toolbar, Formatting Toolbar, Work Area and Status Bar.
- A document can be protected using a password while saving.
- Writer provides three options to view a document \u2013 Normal, Web and Full Screen.

Solved Question Bank

A. Objective Type Questions \u2013 Multiple Choice Questions

Fill in the Blanks

Short Answer Questions

Ans. A word processor is a software application that allows a user to compose, edit, format, save and print text. Popular word processors include LibreOffice Writer, MS Word, WPS Office, Google Docs and WordPad.

Ans. Save (Ctrl+S) updates the same file with the same name, location and format each time it is used. Save As (Ctrl+Shift+S) is used the first time a file is saved, or when the user wants to change the file's name, its storage location, or its file format.

Ans. A Block is a selected/highlighted section of text treated as a single unit. Formatting commands such as Bold, Italic, Font Colour, Cut or Copy can be applied to the entire block at once.

Ans. The Navigator allows a user to move quickly to any object \u2013 such as a Heading, Table, Image, Bookmark or Comment \u2013 in a large document, without having to scroll through the pages.

Ans. In Insert mode, newly typed characters are added at the cursor position and the existing text shifts to the right. In Overtyping mode, newly typed characters replace the existing characters at the cursor position. The Insert key toggles between the two modes.

Long Answer Questions

Ans. (i) Go to File \u2013 Save As. (ii) In the Save As dialog box, tick the \u2013 Save with password\u2013 checkbox. (iii) Click Save; the Set Password dialog box opens. (iv) Type the password in the \u2013 Enter password to open\u2013 box and retype the same password in the \u2013 Confirm password\u2013 box. (v) Click OK. The document can now be opened only after entering the correct password.

Ans. Title Bar shows the document/application name and window control buttons. Menu Bar gives access to all commands through drop-down menus. Standard Toolbar has frequently used tools, common to all LibreOffice apps. Formatting Toolbar a context-sensitive bar whose tools change with the selected object. Side Bar quick access panel for Properties, Styles, Navigator, etc. Work Area the space where text is typed, with a ruler on top. Status Bar shows page number, word count, language and zoom, at the bottom of the window.

Ans. (i) It is very easy to type, edit and format a document to make it appealing. (ii) Documents once created can be stored for future reference. (iii) It produces error-free documents by checking spelling and grammar. (iv) A document can be protected using a password against unauthorised access.

Ans. (i) Using the Recent Documents option in the Start Centre. (ii) Using Open File in the Start Centre, followed by the Open dialog box. (iii) Inside Writer, using File Open or the shortcut Ctrl+O. (iv) Using the Open icon on the Standard Toolbar. (v) Using File Explorer/File Manager to locate and double-click the file directly.

Competency-Based Questions

Ashish, a student of Class 8, has designed a page about himself in Writer and wants to upload it to the Internet. Which document viewing mode should he use to see how the page will look when hosted online?
(i) Normal view (ii) Print preview (iii) Web view (iv) Full Screen view.

Ans. (iii) Web view it shows the document as it would appear when displayed as a web page.

Ms Vinita wants to prepare a handout using LibreOffice Writer. Suggest the most suitable structure (Paragraph / Table / List) for storing each of the following: (a) a formula appearing in the chapter, (b) the summary of the chapter, (c) the headings and subheadings of the chapter, (d) the definitions of technical words..

Ans. (a) Table (for aligned, easily readable presentation of a formula) (b) List (c) List (d) Paragraph.

Activity Time

Editing Text Using Writer

5.1 Why Editing?

Editing: the process of revising a document to remove spelling and grammatical errors, so as to improve its language accuracy, structure of content, and overall readability and meaningfulness. It is an important and desired step in writing.

Editing is important because:

- It ensures the document is error free.
- It allows a user to convey the message clearly to the audience.
- A well-organised, edited document creates a good impact on the audience and a good first impression.

5.2 Selecting Text

While editing, a block of text \u2014 a word, sentence, paragraph, part of a page, or the whole document \u2014 must first be selected. Selected text is highlighted in blue colour.

Selection using Mouse

- Word \u2013 by double-clicking (clicking twice) on the word.
- Sentence \u2013 by clicking thrice (triple-click) on the sentence.
- Paragraph \u2013 by clicking four times in the paragraph.

Selecting Contiguous Text

Using Mouse only: swipe the mouse cursor over the text to be selected.

Using Mouse and Keyboard: double-click to select the first/last word, then hold Alt+F8 and use the Up/Down arrow keys to extend the block; press Esc or Alt+F8 again to exit selection mode (Alt+F8 enables Extending Selection Mode).

Using Keyboard only: place the cursor at the beginning/end of the desired text, then press Shift+Down-Arrow / Shift+Up-Arrow, continuing the same way for the entire block of text.

Selecting Non-contiguous Text

- Select the first block of text using any of the methods above.
- Press and hold the Ctrl key.
- Use the mouse to select the next block of text.
- Repeat steps 2 and 3 to select more block(s).

Selecting a Vertical Block of Text

- Go to Edit \u2192 Selection Mode \u2192 Block Area.
- Use the mouse or keyboard to select the vertical block of text.

5.3 Undo and Redo

Undo (Ctrl+Z): quickly reverts the previous editor action, taking the document one step backward from the current step.

Redo (Ctrl+Y): reverses the action taken by the Undo command.

Both can also be used from Edit \u2192 Undo / Redo, or from their icons on the Standard Toolbar. The drop-down arrow next to each icon displays a list of all changes made, which can be undone/redone in one go.

5.4 Moving and Copying Text

Cut (Ctrl+X): removes the selected text from its current location and places it on the clipboard, for use in moving text.

Copy (Ctrl+C): duplicates the selected text and places it on the clipboard, without removing the original.

Paste (Ctrl+V): inserts the clipboard content at the new cursor location.

Paste Special (Ctrl+Shift+V): allows the user to choose whether the original formatting of the copied text is retained or the destination's formatting is applied while pasting.

To Move (Cut and Paste) Text

- Select the text to be moved.
- Go to Edit → Cut, or click the Cut icon on the Standard Toolbar.
- Move the cursor to the desired destination.
- Go to Edit → Paste / Paste Special, or click the Paste icon.

To Copy and Paste Text

- Using Keyboard: select text → Edit → Copy → move cursor → Edit → Paste/Paste Special.
- Using Mouse: select the text, then press and hold Ctrl while dragging the mouse to the destination (the cursor changes shape while dragging).

5.5 Find and Replace

Find: a feature that allows the user to search for a letter, part of a word, word or sentence within a document.

Replace: swaps the found text with new text; it can also be used to apply any other action such as formatting.

The Find toolbar appears above the Status Bar (View → Toolbars → Find, or Edit → Find, or Ctrl+F). For advanced options, open the Find and Replace dialog box (Ctrl+H, or the Find icon in the Find toolbar / Standard toolbar).

Steps to Use Find and Replace

- Type the text to be searched in the Find box.
- Type the new text in the Replace box.
- Select the desired option, such as Whole words only or Match Case.
- Click Find Next; the user is prompted to Replace or Skip that occurrence.
- Repeat step 4 to continue, or click Replace All to replace every occurrence at once.

Note: Use Replace All with caution, as it replaces all occurrences without asking for individual confirmation. The Match Case option finds an exact match of upper case and lower case letters.

5.6 Navigating Text

Navigator (View → Navigator, or F5) allows a user to jump forward or backward in a document based on an object such as a Table, Graphic, Comment, Link, Heading or Bookmark, without scrolling through pages.

5.7 Non-Printing Characters

Non-Printing (Non-printable) Characters: special characters used for formatting text or as control characters in a document (such as Line Break, Tab, Space, End of Paragraph); they do not appear in the printed document, although they can optionally be displayed on screen for editing convenience.

To display them: View → Formatting Marks, or press Ctrl+F10.

5.8 Checking Spelling and Grammar

The Dictionary tool in Writer helps remove spelling and grammar errors, and also improves writing by suggesting correct prepositions, idioms and phrasal verbs. Spelling and Grammar check are enabled by default.

- A red wavy underline indicates a misspelled word; a blue wavy underline indicates a possible grammatical error.
- Right-click on the underlined word to see the Suggested Correction list, and choose to Replace it, Ignore this occurrence, Ignore All occurrences, or Add the word to the Standard Dictionary.
- To disable Automatic Spell Checking: Tools \u2192 Automatic Spell Checking (or use the Spell Check icon on the Standard Toolbar), or press Shift+F7.

5.9 Using Synonyms and Thesaurus

Thesaurus: a tool that provides a list of alternative words (synonyms) having the same or similar meaning, used to avoid repetition and to make writing more technical and precise.

Quick synonyms: right-click the word \u2192 Synonyms \u2192 choose the desired word from the submenu.

Full Thesaurus (Ctrl+F7): right-click the word \u2192 Synonyms \u2192 Thesaurus \u2192 the Thesaurus dialog box appears with a list of alternatives \u2192 select a word \u2192 click Replace.

Note: This feature is disabled if the Thesaurus is not installed for the selected Language option.

Key Terms

Summary

- Editing is an important and desired step in writing; it is done to improve the structure of sentences, enhance text and make it error free.
- Undo helps in quickly reverting the previous editor action. Redo reverts the action taken by Undo.
- Selection is used to make a block of text; it can be done in many ways using the mouse or the keyboard.
- To transfer a block of text from one place to another, Cut and Paste is used.
- Paste Special allows the user to change or retain the format of the block being pasted.
- To make a duplicate copy of text, Copy and Paste is used.
- Find and Replace is used to quickly locate and swap text in a document.
- Non-printable characters help format a document but do not appear in the printed copy.
- Thesaurus provides synonyms to avoid repetition of words and make writing more precise.

Solved Question Bank

A. Objective Type Questions \u2014 Multiple Choice Questions

Fill in the Blanks

Short Answer Questions

Ans. It is a feature that, when enabled, checks for misspelled words as the user types and underlines them with a red wavy line, along with underlining suspected grammatical errors in blue, without requiring the user to check spellings separately.

Ans. A Thesaurus is a tool, like a dictionary, that provides a list of alternative words (synonyms) of similar meaning for a selected word, helping avoid repetition and making writing more technical and precise.

Ans. Non-printing characters are special formatting/control characters, such as a Line Break, Tab or End-of-Paragraph mark, used internally for formatting a document. They do not appear when the document is printed, but can be displayed on screen using View \u2192 Formatting Marks (Ctrl+F10).

Ans. (i) Open the Find and Replace dialog box (Ctrl+H). (ii) Type the text to be searched in the Find box. (iii) Type the new text in the Replace box. (iv) Select any required option such as Whole words only or Match Case. (v) Click Find Next and then Replace, or click Replace All to replace every occurrence together.

Ans. It saves time by flagging spelling errors as soon as they are typed, so mistakes can be corrected immediately rather than at the end. It can be disabled using the shortcut Shift+F7, or through Tools \u2192 Automatic Spell Checking.

Long Answer Questions

Ans. (i) Click on Automatic Spell Checking under the Tools tab of the Menu Bar to toggle it off. (ii) Click on the Spell Check icon available on the Standard Toolbar (and use its Options to configure grammar checking). Both methods stop the software from automatically underlining spelling and grammar issues while typing.

Ans. (i) Right-click the word whose synonym is desired, then click Synonyms to see a short suggested list directly in the context menu, and choose one. (ii) For a fuller list, right-click the word \u2192 Synonyms \u2192 Thesaurus (or select the word and press Ctrl+F7); the Thesaurus dialog box opens showing a list of alternative words; select the desired word and click Replace to substitute it in the document.

Ans. Find and Replace is a Writer feature used to search for a specific letter, word, part of a word or sentence, and optionally swap it with new text. It can be opened using Ctrl+H, through Edit \u2192 Find and Replace, or via the Find icon on the Standard Toolbar. The dialog box allows searching with options like Match Case and Whole words only, and lets the user Find All occurrences, Replace one occurrence at a time using Find Next/Replace, or Replace All occurrences together.

Ans. (i) Select the text, go to Edit \u2192 Cut, move the cursor to the destination, then Edit \u2192 Paste. (ii) Select the text, click the Cut icon on the Standard Toolbar, move the cursor, then click the Paste icon. (iii) Select the text, right-click and choose Cut from the context menu, move the cursor, right-click and choose Paste. (iv) Use the keyboard shortcuts Ctrl+X to cut and Ctrl+V (or Ctrl+Shift+V for Paste Special) to paste at the new location.

Activity Time

Apply Formatting Features

Once a document is complete in terms of content, the next step is to work on its presentation, so as to make its appearance professional. A well-presented document is easy to read and comprehend.

Formatting: the way of organising the content in the page(s) of a document and its look covering Font, Margins, Alignment, Colour, Indentation, Heading, etc. Writer provides these features grouped under the Format and Styles tabs on the Menu bar.

A document can be formatted in two ways:

Manual Formatting: applying formatting features to a specific object Table, Page, Paragraph, Word or Character by selecting it and formatting it individually; the process is repeated for every object.

Using Styles: applying a desired, named set of formatting options in one go to the entire document (or re-using it in another document).

A document can be formatted at three levels Character, Paragraph/Section, and Page.

6.1 Page Style

Every document created in Writer uses a pre-defined Default Page Style, containing basic page settings, which can be modified using the Page Style dialog box (Format Page Style).

The Page Style dialog box includes the following tabs:

The Page Style dialog also includes Page Size, Margins, Placement of Header and Footer, Border, Backgrounds, and Page Number settings.

6.2 Text Formatting

Formatting applied to Characters usually covers Bold, Italics, Text Size and Font style/colour; formatting at the Paragraph level covers Line spacing, Bullets/Numbering, Indent, etc.

Removing Manual Formatting

To remove manual formatting from selected text, use any one of:

- Format Clear Direct Formatting.
- Right-click the selection Clear Direct Formatting from the context menu.
- Click the Clear Direct Formatting icon in the Formatting Toolbar, or press Ctrl+M.

Common Text Formatting Tools (Formatting Toolbar)

6.3 Font Colour and Highlighting

Font (Text) Colour: the colour applied to the characters of the text; used to catch the reader's attention for a specific purpose.

To change font colour: select the text Format Character Font Effects tab choose colour in Font Colour OK. Alternatively, use the down-arrow on the Font Colour icon on the Formatting Toolbar.

Highlighting: applying a background colour behind a section of text, using the Character dialog box (Format Character Highlighting tab) for a section of text, or the Paragraph dialog box (Format Paragraph Area tab) if the entire paragraph is to be highlighted.

Difference: Background colour will cover the entire space, including blank space/indented lines, in the paragraph, while Highlighting colour is applied only on the text (not on indented empty spaces).

6.4 Formatting Paragraphs

Paragraph formatting deals with (i) changing its shape by adding line spacing and indenting it, and (ii) making it part of a list. It can be done using the Paragraph dialog box (Format → Paragraph) or icons on the Formatting Toolbar.

Indenting a Paragraph

Indentation: positioning a line/block of text further from the margin than the rest of the text.

Use the Indent and Spacing tab of the Paragraph dialog box to set indent spacing in cm, or use the Increase/Decrease Indent icons on the Formatting Toolbar. (Indents can also be set using the horizontal Ruler.)

Aligning Paragraphs

Alignment: the position of a paragraph with respect to the left and right margins. Writer allows four types: Left align, Right align, Center align and Justified.

To align a paragraph: place the cursor in it → Format → Paragraph → Alignment tab → choose the type → OK. Alternatively, use the four Alignment icons on the Formatting Toolbar.

6.5 Changing Text Case

Text Case: how the upper-case/lower-case letters of a word or sentence appear, depending on the theme for which they are used.

Writer provides the following text case options (Format → Text):

- UPPERCASE → all letters capital.
- lowercase → all letters small.
- Sentence case → first letter of the first word of a sentence is capital (the default).
- Capitalize Every Word → first letter of each word capital.
- Cycle case → cycles through case options for the same selected text (Shift+F3).
- TOGGLE cASE → reverses the current case of each letter.

6.6 Superscript and Subscript

Superscript: text placed above the normal text line, e.g. 2³, (a+b)², Company¹²² (shortcut Ctrl+Shift+P).

Subscript: text placed below the normal text line, e.g. C₂₀₈₆H₂₀₈₁O₂₀₈₆, 100₂₀₈₂ (shortcut Ctrl+Shift+B).

Mostly used in Science and Mathematics. Steps: select the text → Format → Character → Position tab → choose Superscript or Subscript → OK.

6.7 Bullets and Numbering

Lists help organise related points, shorten text, and attract the user's attention. Writer provides Bullets (for an unordered list) and Numbering (for an ordered list) via Format → Bullets and Numbering, or Format → Lists → Unordered List / Ordered List (shortcuts Shift+F12 and F12 respectively).

6.8 Border and Background of a Paragraph

Backgrounds and Borders

- Just like paragraphs, borders and backgrounds can be applied to Pages also.

Background Colour in Paragraph

Go to Properties panel on the Sidebar \u2192 expand Paragraph panel \u2192 click the down-arrow on the bucket icon to open the colour palette \u2192 select a colour.

To Give a Border to a Paragraph

- Place the cursor anywhere in the paragraph.
- Open the Paragraph dialog box (Format \u2192 Paragraph) and go to the Borders tab; select the desired border position, width and style.

6.9 Page Formatting

Page formatting commands are accessed using the Page Style dialog box (see 6.1). The layout in Page Style is applicable to all pages of the document and includes Page Size, Margins, Placement of Header and Footer, Border, Backgrounds and Page Number, and so on.

Inserting a Page Break

In a multi-page document, Writer automatically moves text from one page to another when the current page is full. To break a page at a particular place manually:

- Position the cursor at the point from where a new page is to start.
- Go to the Insert tab on the Menu Bar.
- Click on Page Break (shortcut: Ctrl+Enter).

6.10 Creating Header / Footer and Page Number

Header: the portion of the document that appears at the top margin of every page.

Footer: the portion of the document that appears at the bottom margin of every page.

A Title of Document, Chapter, Section name, Author's name, Date of printing, Page number, or Footnote, etc., can be added in the header or footer.

Two ways to add a Header/Footer:

- Click Insert tab \u2192 Header and Footer \u2192 Header (or Footer) \u2192 Page Style (Default Page Style) from the submenu, then type the content.
- Click at the top (or bottom) of the page; the Header (or Footer) marker appears \u2192 click the [+] in the box \u2192 type the text \u2192 click anywhere in the page to exit.

6.11 Dividing Pages into Columns

Dividing a document into sections allows different sections to have different headers, footers, and numbering schemes. Columns allow content to be organised in a User Guide, News-letter or Index style layout.

- Open the Page Style dialog box.
- Click on the Columns tab; specify the Number of columns and the Spacing between columns.
- Click OK to apply.

Columns can also be applied to the whole document or to a selected portion of text using Format \u2192 Columns.

6.12 Special Characters

Special characters (symbols, mathematical signs, etc.) that are not available directly on the keyboard can be inserted through:

- Bring the cursor to the place where the character is to be inserted.
- Click Insert tab \u2192 Special Character (to open the Special Characters dialog box).

- Locate and select the character to be inserted.
- Click Insert.

6.13 Inserting Images

Illustrations \u2014 pictures, charts, graphics, photos, scanned images \u2014 in a document make it attractive and aid comprehension of text.

To insert an image in a document:

- **Method A:** Insert \u2192 Image \u2192 browse and select the image file \u2192 Open.
- **Method B:** Drag and Drop \u2014 select and drag the image from a browser/file window and drop it in the Writer document, at the place where it is to appear.

6.14 Inserting and Formatting Shapes

Shapes: drawing objects which can be used to create custom geometric figures, flowcharts and custom designs in the document; Writer provides a huge library of shapes.

Steps: Insert tab \u2192 Shape \u2192 choose the type of shape from the sub-menu \u2192 draw it on the page using basic mouse functions.

Once a shape is inserted, it can be formatted (line, fill colour, rotate, apply filters, or compress) using tools available from the Format tab of the Menu bar or the Context menu.

Key Terms

Summary

- Formatting refers to the way of organising content in page(s) and its look.
- A document can be formatted manually or by using Styles.
- All pages in Writer are created using a pre-defined Default Page Style, which can be modified.
- A document can be formatted at three levels \u2014 Page, Paragraph/Section and Characters.
- For formatting a Paragraph/Section, either the Paragraph dialog box or the Formatting toolbar can be used.
- Indentation is positioning a line/block of text further from the margin than the other part of text.
- Alignment refers to a paragraph's position with respect to the Left and Right margins of the document.
- Text colour and Highlighting help catch the attention of the reader towards the text.
- Bullets and Numbers organise paragraphs as a list. Bullets create an unordered list; numbers create an ordered list.
- The Page dialog box is used to format the page of a document.
- Ctrl+Enter can be used to insert a page break.
- Headers appear at the top margin and Footers at the bottom margin of a page.
- Dividing a document into sections allows different headers, footers and numbering schemes.
- An image can be inserted using the Insert dialog box or by the Drag & Drop method.
- Shapes are drawing objects used to create custom geometric figures, flowcharts and designs in a document.

Solved Question Bank

A. Objective Type Questions \u2014 Multiple Choice Questions

Fill in the Blanks

Short Answer Questions

Ans. Formatting a document means organising the content of its page(s) and improving its look, by working on Font, Margins, Alignment, Colour, Indentation and Headings, etc., so that the document appears professional and is easy to read.

Ans. (i) Click the Insert tab on the Menu bar. (ii) Click on Shape and choose the desired type of shape from the sub-menu. (iii) Use basic mouse functions to draw the shape on the page at the desired size and position.

Ans. Click on Insert tab \u2192 Header and Footer \u2192 Header \u2192 select (Default Page Style) from the sub-menu, then type the content of the header. Alternatively, click at the top of the page to display the Header marker, click the + symbol, type the text and click anywhere on the page to exit.

Ans. Open a browser or file explorer window alongside the Writer document, select the desired image, then drag it with the mouse and drop it at the place in the Writer document where it is to appear.

Ans. Place the cursor anywhere in the paragraph, open the Paragraph dialog box (Format \u2192 Paragraph), go to the Borders tab, and choose the desired border line style, width, colour and position, then click OK.

Long Answer Questions

Ans. (i) Select the text whose colour is to be changed. (ii) Go to the Format tab on the Menu Bar and click Character to open the Character dialog box (or use the Context menu). (iii) Click the Font Effects tab. (iv) In Font Colour, choose the desired colour and click OK. Alternatively, select the text and use the down-arrow next to the Font Colour icon on the Formatting Toolbar to choose a colour directly.

Ans. (a) Bold emphasises text by making it darker and heavier. (b) Font Colour applies the chosen colour to the characters of the selected text. (c) Character Highlighting Colour applies a background colour behind the selected text to draw attention to it.

Ans. Writer provides UPPERCASE, lowercase, Sentence case, Capitalize Every Word, Cycle case and tOGGLE cASE, accessible from Format \u2192 Text (or the shortcut Shift+F3 to quickly cycle through case options).

Ans. (i) Select the section of text to be highlighted. (ii) Open the Character dialog box (Format \u2192 Character). (iii) Choose the Highlighting tab, select the desired colour, and click OK. If the entire paragraph is to be highlighted instead, use the Area tab of the Paragraph dialog box (Format \u2192 Paragraph) and select the colour there.
